

# MelonSicle

Forbidden Fruit X Watermelon Zkittlez X Watermelon

The new summer hit has arrived! Think lots of fruit and lots of resin: MelonSicle. The second release of the Bastards Line is a great example of what this collaboration between T.H.Seeds™ and Shiloh is all about. For MelonSicle we really took a deep dive searching for that juicy watermelon terpene. With ancestors like Cherry Pie X Tangie (Forbidden Fruit), Watermelon Zkittlez and Watermelon, it is no surprise MelonSicle has such astonishing colors, terpenes and resin production. MelonSicle is a medium to high plant, not too leafy and has great spacing between internodes and each flower. If you give it more time in veg it can become quite wide and tall. MelonSicle is well suited for topping or scrog and you can get big flowers if you grow it well. Just be careful and have good ventilation, because the smell, starting in the vegetative state, is awesome! The flowers have unique colors and smell like ripe fruits, cream and wine, some might even call it sangria. The buds are dense, but not too dense and covered in resin. The colors range from green to purple with a hint of orange, pink and red. MelonSicle is one of the most colorful plants by far. The taste reminds of a melon popsicle, a complex terpene profile with a hint of mixed fruits leading to an enjoyable, creative happiness. MelonSicle from the T.H.Seeds™ Bastards Line is perfect for hash makers, with a great extraction return. MelonSicle is one of the fruitiest plan you will ever grow, an unforgettable experience with amazing results.

## SPECIFICATIONS

2-seeds

25€

6-seeds

55€

FEMINIZED

- **TYPE**  
60% Sativa - 40% Indica
